Identify NFA & DFA

i)

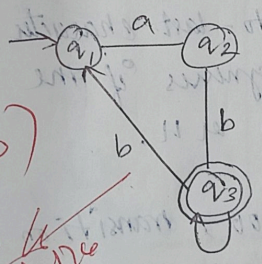

This is NFA (non-Finite automata). from state q_1, there are two transitions with the same input symbol a, leading to different next states (q_2 and q_4) which violates the determinism rule of a DFA and defines it as NFA

Current State : q_1

Input State : q_1

Next State : q_2 and q_4

ii)

From q_3, the input b can lead to two states : q_1 and q_3 ... Therefore, it is an NFA.

Initial State : q_1
Final state : q_3
Total States : 3
Input Symbols : a, b

Input Symbol	Next State
a	q_2
b	q_3
b	q_1
b	q_3
